ABOUT

Building web products that work, end to end.

Freelance full-stack developer based in the Netherlands. I design, build, and ship reliable products for founders and teams — from first line of code to production.

SKILLS & STACK

Backend

Node.js / Python

REST & GraphQL APIs

PostgreSQL

Auth & payments

Frontend

React / Next.js

TypeScript

Design systems & accessibility

Performance tuning

Infra & Ops

Docker & CI/CD

AWS / Vercel deployment

Monitoring & logging

GDPR-aware data handling

EDUCATION

MBO level 3 · Medewerker Beheer ICT

2013-2016 · ROC van Twente, Hengelo

MBO level 4 · Application Manager

2016-2017 · ROC van Twente, Hengelo

CASE STUDIES

[See all work →](#)

Tracker

2026 · GitHub

[Thijssen Software](#)

A self-hosted issue tracker built to replace Linear once it hit its free-tier limit. Multiple projects, each with its own key and independent issue numbering, epics and sub-issues, a Kanban board, a token-authenticated API, and a command-line client that turns a new ticket straight into a ready-to-use git branch.

Result: It replaced the paid SaaS entirely and became the day-to-day tracker for every project I run, with ticket creation wired directly into my development workflow.

Laravel Vue 3 TypeScript Inertia Tailwind

Project name

2025

[Client name](#)

Rebuilt checkout flow, cut load time by 40% and lifted conversion.

Next.js Stripe

Data-Exchange Portal

2021-2022

[Dotweb Cloud \(later Visma Verzuim\)](#)

A data-exchange portal connecting a Dutch absence-management (verzuim) platform to external HR systems, principally Raet. It mapped each partner's incoming data into the canonical format our API accepted, migrating roughly 500 Raet-side partners and exchanging object lists of 20,000 to 200,000 records per day.

Result: Live within a week, it became the working integration route for onboarding Raet partners at scale, handling hundreds of thousands of records a day.

Laravel

PHP

jQuery

Bootstrap

Internal dashboard

2024

[Client name](#)

Built internal dashboard replacing three spreadsheets.

React

Node.js

Postgres

MVP launch

2024

[Client name](#)

Launched MVP in 6 weeks, from spec to first paying customer.

Vue

Python
